

ATA Average Card

The outside of the card contains historical information for the previous four target years, as well as your member number, current address, date of birth (if it is on file with the ATA), membership type (life or annual), and current handicap yardage assignment. The card may also be annotated with information if it is issued as a result of an address change or yardage review.

The inside of the card must be filled out and updated by every shooter. Failure to do so may result in penalty classification, disqualification and/or suspension from membership. You must present your completed card for classification and handicapping at each tournament you enter. If you do not do so, the classifier may place you in the highest classification for both singles and doubles.

Keeping your average card up to date is really simple, so long as you do so at the end of every shooting day or at least at the end of every shoot. The inside of your card contains the following blanks for you to fill in (remember, all information is for registered targets only):

Date—simply, the date the targets you are recording on this line were shot.

Place—the club location where the targets were shot.

SGLS—your singles score for that day by event (for example, 196 in a 200-target event or 46 in a 50-target event); 200-target events shot over more than one day should

be recorded in whatever numbers they are shot for each day (96 on one day and 94 on the second day, for example).

Class—the class in which you were competing in that event—AAA, AA, A, B, etc.

Average—your running average on all registered singles for the current target year. Each year, you start a new average; there are no carryovers from previous target years. If you break a 198 in a 200-target race on Sept. 10 and that is your first shoot of the year, your average is 99.00. Add up all the targets you record on your card and divide the resulting number by the number of hundred targets you have shot at. In the above example, 198 is divided by two.

Alternatively, you can divide the number of targets hit by the number shot at, 198 divided by 200 which results in .9900 or an average of 99.00.

Even with the Big 50 program, simply divide the targets hit by the number shot or the number (including fractions) of hundreds shot. Let's say you shot a Big 50 after your 198 and broke 48. $198 + 48 = 246$; 246 divided by 2.5 is an average of 98.40, and 246 divided by 250 equals 98.40. Either method gives the correct answer.

WT—this column is intended for you to indicate if you won or tied for your class; a mark in the appropriate place is all that is required. If you are fortunate enough to win high gun, you should also indicate a "W," or a "T" if you tied for the top prize. The

purpose of this column is to aid classifiers, particularly if you are on the dividing line between two classes. If you are high gun or runnerup, that is information a classifier will want to know.

HDCP—your handicap scores for that day. All handicap scores are recorded by event, regardless of the length of the event.

DBLS—your doubles scores for that day. Treat this just like the singles, as described above.

Class—the class in which you competed for doubles that day.

Average—your running doubles average for the target year. This is computed just like the singles average.

WT—wins or ties in the doubles event.

If you fill up your card, extension cards are available from the ATA, or check with shoot management at any tournament. Additionally, vendors frequently provide extension cards as a courtesy to customers. Until you get a new card or while waiting for your new card at the beginning of the target year, it is wise to keep your scores in a notebook (or on the back of your annual dues receipt), then when you get the card you can transfer the information.

If you change addresses, you can notify ATA by mail or fill out a new card request/address change at any shoot. Shortly after doing so, you will receive a new average card and a new plastic card reflecting your current information.

Good shooting!
